"NEW STEROIDS"FIELD OF THE INVENTION

5

The present invention relates to novel antiinflammatory, immunosuppressive, and antiallergic compounds and to processes for their preparation. The invention also relates to pharmaceutical compositions containing the compounds. The invention also relates to the pharmacological
10 uses of the compounds.

15

More particularly, this invention relates to new therapeutically useful steroids, processes for their preparation, pharmaceutical compositions containing them, and methods for their use, especially as anti-inflammatories.

20

The object of the invention is to provide a steroid which possesses high antiinflammatory, immunosuppressive and antiallergic activity, or a pharmaceutical composition thereof, with high activity at the site of application, e.g. in the respiratory tract, on the skin, in the joints, in the intestinal tract, or in
the eye, coupled with low glucocorticoid systemic potency.

25

A large number of natural and synthetic steroids are known, and many of them are useful in the treatment of human and animal subjects. Steroids which have antiinflammatory properties are known, but they suffer from the disadvantage that, after administration, they cause unwanted side-effects outside the organ or tissue which is desired to be treated. It is well known that, in the pharmaceutical field and, in particular, in the field of steroids, small differences in chemical structure can produce compounds with completely different pharmacological activities. The present invention provides
30 compounds which have never been described hitherto and which possess a

remarkable combination of very useful antiinflammatory activity with a very low ability to produce undesired side-effects.

The nomenclature used in this application is as follows:

The 1,2-position and 4,5-position of the A ring and 6,7-position of the B ring may be saturated or a double bond.

The compounds of this invention may be described by general formula I

formula I

where:

----- is independently at each of the 1,2-, 4,5- and 6,7-positions, a single or double bond;

R₁ is a straight- or branched-chain C₁₋₄ alkyl or C₂₋₄ alkenyl;

R₂ is hydrogen or methyl;

R₃ is C₁₋₇ alkyl, phenyl, substituted phenyl, heteroaryl, substituted heteroaryl or -CH₂R where R is halo, hydroxy, C₁₋₅ alkoxy or C₁₋₁₀ alkanoyloxy;

R₄ is hydrogen, halo, hydroxy, keto or C₁₋₃ alkoxy when $\text{---}\text{---}\text{---}\text{---}$ at the 6,7-position forms a single bond, or hydrogen, halo or C₁₋₃ alkoxy when

$\text{---}\text{---}\text{---}\text{---}$ at the 6,7- position forms a double bond;

R₅ is hydrogen or halo;

5 R₆ is hydrogen when $\text{---}\text{---}\text{---}\text{---}$ at the 1,2-position forms a single bond or hydrogen or chloro when $\text{---}\text{---}\text{---}\text{---}$ at the 1,2-position forms a double bond; and n is 0-2; and

racemic mixtures and diastereoisomers thereof.

10

DETAILED DESCRIPTION AND PREFERRED EMBODIMENTS

The preferred compounds of this invention are described by formula I where:

15 $\text{---}\text{---}\text{---}\text{---}$ is a double bond at the 1,2- and 4,5-positions and a single bond at the 6,7-position or a double bond at the 4,5- position and single bonds at the 1,2- and 6,7- positions.

The more preferred compounds are described by formula I

20 where:

$\text{---}\text{---}\text{---}\text{---}$ is a double bond at the 4,5-position and single bonds at the 1,2- and 6,7-positions;

R₁ is alkyl;

R₂ is hydrogen, or methyl;

25 R₃ is alkyl, haloalkyl or heteroaryl;

R₄ is hydrogen, halo, or keto ;

R₅ is halo;

R₆ is hydrogen; and

n is 0-2.

The most preferred compounds of this invention are described by formula I where:

 is a double bond at the 4,5-position and single bonds at the 1,2-
5 and 6,7-positions;
R₁ is methyl, propyl or trans-prop-1-enyl ;
R₂ is hydrogen, or methyl;
R₃ methyl, fluoromethyl or pyridyl;
R₄ is hydrogen, fluoro, or keto ;
10 R₅ is fluoro;
R₆ is hydrogen; and
n is 0-2.

15 An embodiment of this invention is described where the 1,2-, 4,5- and 6,7- positions are all single bonds.

Compounds of formula I can exist in two diastereoisomeric forms because two different configurations are possible at the carbon atom in the 20 position. As a result, the invention includes the (20R)- and (20S)-diastereoisomers of the compounds of formula I, and mixtures thereof when R₁ and R₂ are different.

25 The preferred diastereoisomeric components are in the (20R)-configuration.

More specifically, the following compounds are within the scope of this invention:

The compounds of this invention are extremely valuable in the local
treatment of inflammatory, allergic and immunological diseases. These
treatments include those currently treated by known steroids, such as diseases
25 of the respiratory system, e.g. asthma and rhinitis, diseases of the skin, e.g.
eczema, and diseases of the gastrointestinal tract, e.g. inflammatory bowel
disease. However, because of the advantage of having little or no side effects,
the compounds of this invention are much more desirable than previously
known compounds.

30

The use of the compounds of formula I, and of pharmaceutical formulations containing them in the treatment of such diseases, form features of the present invention.

5 These utilities have been demonstrated in pharmacological tests which are believed to correlate well to activity in humans and other mammals.

10 The compounds of formula I can be prepared by the application or adaptation of known methods, by which is meant methods used hitherto or described in the literature.

The compounds of this invention may be prepared, for example, by the following reactions:

15 According to the present invention, compounds of formula I wherein n represents zero and --- , R_1 , R_2 , R_3 , R_4 , R_5 and R_6 are as hereinbefore defined, are prepared by a radical fragmentation reaction from compounds of formula II,

20

wherein --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, and R_7 represents a suitable group such as a 2-thioxo-1,2-dihydropyrid-1-yl oxycarbonyl group, by irradiation in the presence of a compound of the general formula:-

25

wherein R_3 is as hereinbefore defined, R_8 represents a hydrogen atom or an alkyl group containing up to about 7 carbon atoms, and m represents 0 or 2, under an inert atmosphere.

According to a further feature of the present invention, compounds of
 5 formula I wherein R_3 represents a pyridyl group, n represents zero, and --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, are prepared by a similar radical fragmentation reaction from compounds of formula II, hereinbefore depicted, wherein --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, and R_7 represents a 2-thioxo-1,2-dihydropyrid-1-yloxycarbonyl group, by irradiation in
 10 the absence of the said compounds of the general formula:-

According to a further feature of the invention, compounds of formula I
 15 can be prepared by the interconversion of other compounds of formula I.

For example, compounds of formula I wherein --- , R_1 , R_2 , R_3 , R_4 , R_5 and R_6 are as hereinbefore defined and n represents 1 or 2 are prepared by the oxidation of compounds of formula I wherein --- , R_1 , R_2 , R_3 , R_4 , R_5 and R_6 are
 20 as hereinbefore defined and n is less than in the desired product.

The oxidation may be performed by using a conventional oxidising agent such as potassium peroxymonosulphate to prepare products wherein n is 1 or a peracid to prepare products wherein n is 2.

25

As another example, compounds of formula I wherein --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, n represents zero, and R_3 represents a halomethyl group are prepared by the halogenation of compounds of formula I wherein --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, n represents
 30 zero, and R_3 represents a methyl group. For example, when R_3 represents a fluoromethyl group the reaction can be carried out by the action of xenon

difluoride, preferably in the presence of an activated molecular sieve and a non-nucleophilic base.

As another example, compounds of formula I wherein --- , n, R₁,
5 R₂, R₃, R₅ and R₆ are as hereinbefore defined, and R₄ represents an
alkoxy group are prepared by the alkylation of compounds of formula I
wherein --- , n, R₁, R₂, R₃, R₅ and R₆ are as hereinbefore defined, and
R₄ represents a hydroxy group, by known methods, for example by
reaction with a base followed by reaction with an alkyl halide, e.g. methyl
10 iodide when R₄ is methoxy.

As another example, compounds of formula I wherein one or more
of the symbols --- , forms a single bond, the symbols otherwise being as
hereinbefore defined, are prepared from compounds of formula I wherein
15 said symbol or symbols --- , form double bonds by hydrogenation in the
presence of a catalyst. For example compounds of formula I wherein
the symbol --- , forms a single bond in the 1,2-position, the symbols
otherwise being as hereinbefore defined, are prepared from compounds
of formula I wherein said symbol --- , forms a double bond by
20 hydrogenation in the presence of a rhodium compound, e.g. rhodium
bis(triphenylphosphine) chloride.

The diastereoisomers of general formula I can be separated from their
mixtures, by the application or adaptation of known methods, for example
25 chromatographic and recrystallisation techniques, or they may be separately
prepared from the appropriate isomers of their intermediates, for example by the
application or adaptation of methods described herein.

The starting materials and intermediates can be prepared by the application or adaptation of known methods, for example methods described in the Reference Examples or their obvious chemical equivalents.

- 5 For example, compounds of formula II can be prepared from compounds of formula III,

- 10 wherein --- , R_1 , R_2 , R_4 , R_5 and R_6 are as hereinbefore defined, by conversion of the carboxy group to the said group R_7 , by the application or adaptation of known methods.

- 15 Compounds of formula III can be prepared from compounds of the general formula IV,

- 20 wherein --- , R_4 , R_5 and R_6 are as hereinbefore defined, by reaction with compounds of the general formula:-

wherein R_1 and R_2 are as hereinbefore defined and R_9 is a methyl or ethyl group, in the presence of a protic acid, e.g. perchloric acid.

5

Compounds of formula IV wherein R_4 represents a hydroxy group and --- , R_5 and R_6 are as hereinbefore defined, can be prepared from compounds of the general formula V,

10

wherein --- , R_5 and R_6 are as hereinbefore defined, by reaction with potassium superoxide in the presence of an agent such as 1,4,7,10,13,16-hexaoxa-cyclooctadecane, preferably in a solvent such as dimethylformamide.

15

Alternatively, compounds of formula III can be prepared by the following reaction sequence.

Methods of Preparation

- 5 The following Examples illustrate the preparation of compounds according to the present invention. All $^1\text{H-NMR}$ spectra are recorded at 400MHz. The chemical shifts are expressed in ppm relative to tetramethylsilane. Abbreviation in the text have the following significances: s = singlet, d = doublet, t = triplet, q = quartet, dd = doublet of doublets, dt = doublet of triplets, m = multiplet, c = unresolved complex peak, b = broad signal.
- 10 Optical rotations are measured using a polarimeter model AA-10.

Example 11.1) 9 α -Fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -(methylthio)androsta-1,4-dien-3-one

5 A solution of 9 α -fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -(2-thiop yridone-1-oxycarbonyl)androsta-1,4-dien-3-one (2.1 g) in dimethyl disulfide (80 ml) is irradiated with a tungsten lamp (300 W) at -8°C under an atmosphere of nitrogen untill the reaction is complete (1-3 hours). The dimethyl
10 disulfide is removed under vacuo and the residue purified by low pressure liquid chromatography on silica gel eluting with chloroform. The solid obtained after evaporation of the solvent is recrystallised from ethyl acetate to give 9 α -fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -(methylthio)androsta-1,4-dien-3-one as a white solid (0.5 g, 1.2 mmol), m.p. 256°C; [N.M.R. 6.1) (20R,S)-16 α ,17 α -Butylidenedioxy-6 α ,9 α -difluoro-
11 β -hydroxy-3-oxoandrost-4-ene-17 β -carboxylic acid

To a degassed (N₂) solution of methanol (250ml) and water (15ml) is added sodium hydroxide pellets (5.52g, 138mmol). When homogeneous, (20R,S)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-3-oxoandrosta-1,4-diene-17 β -carboxylic acid (12.48g, 27.6mmol) is added in one portion and the suspension stirred until a yellow solution is obtained. The reaction mixture is treated dropwise at room temperature with iron pentacarbonyl (36.31ml, 276mmol), then heated at 50°C for 20 hours under an atmosphere of nitrogen. The cooled reaction mixture is poured into an ice-cold aqueous solution of sulfuric acid (4N, 1000ml), dichloromethane (750ml) is then added, and after decantation the clear aqueous layer is discarded. The organic phase washed with brine (500ml), dried over sodium sulfate, filtered and concentrated to half of the original volume by evaporation in vacuo. The resulting residue is filtered on a pad of silica gel, eluting first with dichloromethane, then with ethyl acetate, and finally with a mixture of ethyl acetate and methanol (1:1). Concentration in vacuo gives a white foam which is triturated with diisopropyl ether to give: (20R,S)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-3-oxoandrost-4-ene-17 β -carboxylic acid as an off-

white solid (12.7g, 27.7mmol), m.p. 210°C (dec.); [NMR(DMSO, d₆):

 16 α ,17 α -butylenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-3-oxoandrosta-1,4-diene-
 25 17 β -carboxylic diethyl phosphoric anhydride (17.2g) gives after work up 2-
 thioxo-1,2-dihydropyrid-1-yl (20R,S)-16 α ,17 α -butylenedioxy-6 α ,9 α -difluoro-
 11 β -hydroxy-3-oxoandrosta-1,4-diene-17 β -carboxylate (16.6g) which is used as
 such in the next step.

6.4) (20R,S)-6 α ,9 α -Difluoro-11 β -hydroxy-16 α ,
17 α -butylenedioxy-17 β -methylthioandrost-4-en-3-one

By proceeding as described in Example 1, 2-thioxo-1,2-dihydropyrid-1-yl
 5 (20R,S)-3-oxo-6 α ,9 α -difluoro-11 β -hydroxy-16 α ,17 α -butylenedioxyandrost-4-
 ene-17 β -carboxylate (16.6g), as starting material affords after work up an off-
 white powder (12g) which is purified by low pressure liquid chromatography on
 silica gel, eluting with a mixture of diethyl ether and petroleum spirit (75:25).
 The white solid obtained (6g) is recrystallised from acetonitrile to give (20R,S)-
 10 6 α ,9 α -difluoro-11 β -hydroxy-16 α ,17 α -butylenedioxy-17 β -methylthioandrost-4-
 en-3-one (4g) as a mixture of epimers (20R,S)-in proportions 90:10, which is
 resolved by preparative HPLC using a Dynamax RP-18 column and
 methanol/water as mobile phase. The (20R)-epimer is obtained as a white
 solid (3.4g, 7.45mmol), m.p. 180°C; [NMR(DMSO, d6):

5 To a stirred mixture of 9 α -fluoro-11 β -16 α ,17 α -21-tetrahydroxypregn-4-ene-3,20-dione (2 g) in dry dimethylformamide (30 ml) is added potassium superoxide (1.4 g) followed by 18-crown-6 (1.3 g) and cooling used to maintain the temperature at 25-38°C. The reaction mixture is stirred for 1/2 an hour,
10 treated with water (300 ml), acidified to pH 9, washed with ethyl acetate (2 times) then acidified to pH 2 (using concentrated hydrochloric acid) and extracted with ethyl acetate (3 times). The combined organic extracts were washed with brine and dried over magnesium sulfate. Filtration of the dessicant and concentration in vacuo gives α -fluoro-11 β -16 α ,17 α -trihydroxy-3-
15 oxoandro-4-ene-17 β -carboxylic acid (0.9 g) as a white solid .

The present invention also includes within its scope pharmaceutical formulations which comprise an effective amount of at least one of the
20 compounds of formula I in association with a pharmaceutically acceptable carrier or coating.

PHARMACOLOGICAL USES

25 An object of the invention is to provide a topical antiinflammatory, immunosuppressive and antiallergic steroid, or a pharmaceutical composition thereof, for the following:

topical treatment of skin conditions such as dermatitis, psoriasis,
30 sunburn, eczema, neurodermatitis and anogenital pruritis;

inhaled treatment of airways conditions such as allergy, asthma and rhinitis, chronic obstructive pulmonary disease, interstitial lung diseases and fibrosis;

5 local treatment of inflammatory bowel conditions such as ulcerative colitis and Crohn's disease; and

 local treatment of conjunctiva and conjunctivitis.

10 The topical treatment of such conditions by steroid compounds of this invention is associated with no side-effects or minimal side-effects associated with typical systemic steroid activity, such as suppression of hypothalamus-pituitary-adrenal function, mobilisation of glucose stores, collagen disorders, mineralocorticoid function, adrenal atrophy, osteoporosis and suppression of
15 bone growth and atrophy of thymic tissue.

 This may be achieved by a combination of direct delivery of the steroid to the application site, and by reduced systemic activity, caused by restricted absorption or by rapid in-vivo metabolism of the steroid. Thus, inactivation of
20 the steroid can be by metabolism in the target organ or, after uptake into the general circulation, e.g. by metabolism or excretion. Such compounds are often referred to as "soft" steroids.

PHARMACOLOGICAL TEST SYSTEMS

Biological test results on compounds of this invention are exemplified as follows:

5

GLUCOCORTICOID AGONIST ACTIVITY

STEROID BINDING TO THE RAT THYMUS GLUCOCORTICOID RECEPTOR

10 Thymi of male adrenalectomised rats are removed and homogenised in 3-(N-morpholino)propanesulphonic acid dithiothreitol buffer, and centrifuged at 100,000g. The supernatant cytosol is used as the source of receptor. Steroid (1-16nM in doubling dilutions) and [³H] dexamethasone (4nM) are equilibrated with receptor for 24 hours at 4°C. Bound [³H] dexamethasone is separated
15 from free dexamethasone by a dextran coated charcoal technique and is quantified by liquid scintillation counting. The IC₅₀ (concentration reducing [³H] dexamethasone binding by 50%) is calculated from the plot of the fraction bound against added steroid concentration.

20 The following results demonstrate the effectiveness of compounds of this invention when subjected to the above glucocorticoid receptor binding assay:

10 INHIBITION OF TUMOUR NECROSIS FACTOR (TNF- α) RELEASE FROM HUMAN PERIPHERAL BLOOD MONOCYTES

Monocytes are obtained from blood samples taken from normal human donors. The leukocyte population is washed, applied to a discontinuous metrizamide gradient, and fractionated by centrifugation. The monocyte-enriched interface is aspirated, the cells washed and total and differential counts performed to determine the number of monocytes. Cells are allowed to adhere to 96-well plates for 1 to 2 hours, and thereafter incubated (8x10⁵ monocytes/well) with the steroid for 18 hours (37°C in 5% CO₂). Cells are challenged with 10ng/ml lipopolysaccharide for 4 hours and TNF- α is assayed by use of an enzyme-linked immunosorbent assay. TNF- α quantification is performed with goat anti-human TNF- α being used as the coating antibody, rabbit anti-human TNF- α as the second antibody, and goat anti-rabbit IgG horseradish peroxidase as the detection antibody. The IC₅₀ is the steroid concentration reducing TNF- α release by 50%. IC₅₀=0.25nM

INDUCTION OF TYROSINE AMINOTRANSFERASE ACTIVITY

Rat liver H4IIE cells are cultured for 4 days until the cells are confluent. The medium is replaced by fresh medium, containing steroid under test (0-
5 100nM) which is added to triplicate wells. After overnight incubation as above, the medium is removed and the cells are lysed and the extract is equilibrated at 37°C with α -ketoglutarate and pyridoxal phosphate in phosphate buffer, pH 7.3, in a final volume of 1ml. Tyrosine aminotransferase activity is initiated by
10 adding tyrosine and incubating at 37°C for 10 minutes. The reaction is stopped by adding aqueous sodium hydroxide solution (10M). The ultra-violet absorbance of the para-hydroxybenzaldehyde is measured by a plate reader at 340nm. The maximal absorbance change achieved with the standard (dexamethasone) is used as a reference. The absorbance change for each
15 concentration of steroid under test is calculated as a fraction of the maximal absorption achievable and plotted against steroid concentration. The ED₅₀ is determined as the concentration causing an increase in tyrosine aminotransferase activity of 50% of the maximum achievable.
IC₅₀=0.3nM

INHIBITION OF RAT LUNG OEDEMA IN-VIVO:

Test compounds are suspended in 1% carboxymethyl-cellulose/0.2% Tween 80 at double the required strength and sonicated to form a suspension.

- 5 This is administered intra-tracheally (i.t.) to male rats (Sprague-Dawley strain, 6 in each group, each weighing about 350g) at 0 hours and 24 hours, with the first dose being co-administered with saline and the second with Sephadex G200 [cross-linked dextran] (10mg/ml) giving a final Sephadex concentration of 5mg/ml. I.t. dosing is carried out under halothane anaesthesia (4% in oxygen, 10 at 4 litres/minute for 3 minutes). At 48 hours, the rats are killed, final body weight is recorded, and the lungs and thymus are removed and weighed. The doses reducing the Sephadex-induced oedema and the thymus weight by 30% (ED₃₀) are calculated. Airway selectivity is defined as the ratio of thymus involution (ED₃₀) and inhibition of lung oedema (ED₃₀).
- 15 Lung oedema: ED₃₀ = 0.003 mg/kg

Thymus involution: ED₃₀ = 2.2 mg/kg

Airway selectivity: 733.

INHIBITION OF MOUSE EAR OEDEMA IN-VIVO

- (i) Steroids are dissolved in acetone and administered epicutaneously to the ventral and dorsal surfaces of the right ear pinna of female mice (CD1 strain, 25 5 in each group, each weighing about 20g). 18 Hours later, phorbol myristate acetate (PMA, 1.25µg/ear) in acetone is applied epicutaneously to the right ear. The mice are killed 4 hours later, and a 5mm disc is punched out of each ear and weighed. The dose reducing PMA-induced oedema by 50% (ED₅₀) is determined from linear regression.
- 30 Inhibition of PMA-induced mouse ear oedema: ED₅₀ = 0.0082 µg/ear

(ii) Ovalbumin sensitised mice are challenged with antigen injected into the right ear intradermally under 4% halothane anaesthesia (4% in oxygen, 4 litres/minute for 2 minutes) 18 hours after topical treatment with the steroids [as above in (i)]. The mice are killed 1 hour later, and a 5mm disc is punched out of each ear, and weighed. The dose reducing the oedema by 50% (ED₅₀) is determined as above.

Inhibition of antigen-induced mouse ear oedema: ED₅₀ = 0.026 µg/ear

In view of the results obtained when compounds of the present invention are subjected to the above tests, it can be demonstrated that valuable properties for the relief of inflammation are indicated.

In clinical practice the compounds are administered in a form suitable for the area of the body to be treated. For example, for the treatment of diseases of the respiratory system they are usually administered as aerosols or, preferably, as dry powder formulations, and for the treatment of diseases of the skin they are usually administered as creams, ointments or lotions. Such formulations are prepared by the application or adaptation of known methods such as the following.

PHARMACEUTICAL COMPOSITIONS

For the topical treatment of skin conditions, the steroids may be administered in a conventional pharmaceutical carrier such as creams, ointments, lotions, emulsions, solutions, foams, or the like.

The steroid compounds of this invention may be used for topical treatment of skin conditions, in the range of about 0.0001 to about 5%, preferably about 0.01 to about 2%, by weight of the vehicle.

For the topical treatment of allergy and asthma the steroids may be administered as a dry powder, for example in a single dose inhaler or a multidose inhaler, or as a suspension or a solution in a metered dose aerosol unit or in a nebuliser, with a suitable carrier, or the like. Such devices are well known in the art and standard modes of preparation may be employed or adapted.

Such formulations for inhalation typically contain from about 10 to about 4,000, preferably from about 100 to about 1,600, μg per dose.

10

Still further, steroids of this invention may be administered in anal or peri-anal formulations, e.g. foams, solutions or suspensions and suppositories. Such formulation techniques are well known in the art.

15

An example of a formulation as a retention enema for the treatment of ulcerative colitis (this can also be a continuous drip, i.e. a solution formulation) can be found in the specification of U S Patent 4,710,495.

Formulation as liposomes may be used as described in the specification of WO 92/13873.

20

Slow release oral formulations such as formulations for release into the intestine or colon or both, e.g. slow release tablets, may also be employed.

25

Such oral and anal or peri-anal formulations are typically administered so as to deliver from about 0.1 to about 100, preferably from about 5 to about 50, mg per day.

The following Composition Example illustrates pharmaceutical compositions according to the present invention.

30

COMPOSITION EXAMPLE 1

(20R)-6 α ,9 α -Difluoro-11 β -hydroxy-16 α ,17 α - butylidenedioxy-17 β -methylthioandrosta-4-en-3-one (1.0g) (mean particle size 3.5 microns) and
5 lactose (99g) (mean particle size 72 microns) are blended together for 30 minutes in a mechanical shaker/mixer. The resulting blend is filled, to a fill weight of 25mg, into No.3 hard gelatine capsules, to give a product suitable for use, for example, with a dry powder inhaler.

CLAIMS

1. A compound of the formula:

5

where:

----- is independently at each of the 1,2-, 4,5- and 6,7-positions, a single or double bond;

10 R₁ is a straight- or branched-chain C₁₋₄ alkyl or C₂₋₄ alkenyl;

R₂ is hydrogen or methyl;

R₃ is C₁₋₇ alkyl, phenyl, substituted phenyl, heteroaryl, substituted heteroaryl or -CH₂R where R is halo, hydroxy, C₁₋₅ alkoxy or C₁₋₁₀ alkanoyloxy;

15 R₄ is hydrogen, halo, hydroxy, keto or C₁₋₃ alkoxy when ----- at the 6,7-position forms a single bond, or hydrogen, halo or C₁₋₃ alkoxy when

----- at the 6,7- position forms a double bond;

R₅ is hydrogen or halo;

R₆ is hydrogen when ----- at the 1,2-position forms a single bond or

20 hydrogen or chloro when ----- at the 1,2-position forms a double bond; and

n is 0-2; and

racemic mixtures and diastereoisomers thereof.

2. A compound according to Claim 1

where:

5  is a double bond at the 1,2- and 4,5-positions and a single bond
at the 6,7-position;
R₁ is alkyl or alkenyl;
R₂ is hydrogen, or methyl;
R₃ is alkyl, haloalkyl or heteroaryl;
R₄ is hydrogen, halo, or keto ;
10 R₅ is halo;
R₆ is hydrogen; and
n is 0-2.

15 3. A compound according to Claim 2

where:

 is a double bond at the 1,2- and 4,5-positions and a single bond
at the 6,7-position;
R₁ is methyl, propyl or trans-prop-1-enyl ;
20 R₂ is hydrogen, or methyl;
R₃ is methyl, isopropyl, fluoromethyl or pyridyl;
R₄ is hydrogen, fluoro, or keto ;
R₅ is fluoro;
R₆ is hydrogen; and
25 n is 0-2.

4. A compound according to Claim 1
where:

---- is a double bond at the 4,5-position and single bonds at the 1,2,
and 6,7-positions;

- 5 R₁ is alkyl or alkenyl;
 R₂ is hydrogen, or methyl;
 R₃ is alkyl, haloalkyl or heteroaryl;
 R₄ is hydrogen, halo, or keto ;
 R₅ is halo;
10 R₆ is hydrogen; and
 n is 0-2.

5. A compound according to Claim 4

15 where:

---- is a double bond at the 4,5-position and a single bond at the 1,2-
and 6,7-positions;

- R₁ is methyl, propyl or trans-prop-1-enyl ;
 R₂ is hydrogen, or methyl;
20 R₃ is methyl, fluoromethyl or pyridyl;
 R₄ is hydrogen, fluoro, or keto ;
 R₅ is fluoro;
 R₆ is hydrogen; and
 n is 0-2.

25

6. A compound according to Claim 3 which is

 9 α -fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -
30 (methylthio)androsta-1,4-dien-3-one;

9 α -fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -
(methylsulphonyl)androsta-1,4-dien-3-one;

5 9 α -fluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -(2-
pyridylthio)androsta-1,4-dien-3-one;

6 α ,9 α -difluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -
(methylthio)androsta-1,4-dien-3-one; and

10

6 α ,9 α -difluoro-11 β -hydroxy-16 α ,17 α -isopropylidenedioxy-17 β -(fluoro-
methylthio)androsta-1,4-dien-3-one.

15 7. A compound according to Claim 3 selected from:

(20R)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
(methylthio)androsta-1,4-dien-3-one;

20 (20R,S)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -(2-pyridyl-
thio)androsta-1,4-dien-3-one;

(20R)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
(methylsulphonyl)androsta-1,4-dien-3-one;

25

(20R,S)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
(isopropylthio)androsta-1,4-dien-3-one;

(20R,S)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
30 methylthioandrosta-1,4-dien-3-one;

(20R)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
(fluoromethylthio)androsta-1,4-dien-3-one;

5 (20R)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(methylthio)androsta-1,4-dien-3-one;

(20R)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(methylsulphonyl)androsta-1,4-dien-3-one;

10 (20R)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(fluoromethylthio)androsta-1,4-dien-3-one;

(20R)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(methylthio)androsta-1,4-dien-3-one;

15 (20S)-16 α ,17 α -butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(methylsulphonyl)androsta-1,4-dien-3-one; and

(20R)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
20 (methylthio)androsta-1,4-diene-3,6-dione.

8. A compound according to Claim 3 which is (20R)-16 α ,17 α -[(E) 2-
butenylidenedioxy]-9 α -fluoro-11 β -hydroxy-17 β -(methylthio)androsta-1,4-dien-3-
25 one.

9. A compound according to Claim 5 selected from:

(20R,S)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -
(methylthio)androst-4-en-3-one;

5

(20R)-16 α ,17 α --butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -(fluoro-
methylthio)androst-4-en-3-one;

10 (20R)-16 α ,17 α --butylidenedioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -
(methylthio)androst-4-en-3-one; and

(20R)-16 α ,17 α -butylidenedioxy-9 α -fluoro-11 β -hydroxy-17 β -(methylthio)-
androst-4-ene-3,6-dione.

15

10. A compound according to Claim 1 where the 1,2-, 4,5- and 6,7- positions
are all single bonds.

20 11. A compound according to Claim 10 which is (20R)-16 α ,17 α -butylidene-
dioxy-6 α ,9 α -difluoro-11 β -hydroxy-17 β -(methylthio)androstan-3-one.

25 12. A method for the treatment of a patient in need of an antiinflammatory,
immunosuppressive or antiallergic treatment which comprises administering to
said patient an effective antiinflammatory, immunosuppressive or antiallergic
amount of a steroid compound of Claim 1.

30 13. A pharmaceutical composition which comprises a steroid of Claim 1 in
association with a pharmaceutical carrier or coating.

14. A pharmaceutical composition for the treatment and/or prophylaxis of disorders associated with inflammation which comprises an antiinflammatory effective amount of a compound of Claim 1 to ameliorate said disorder.

15. A process for the preparation of a compound according to Claim 1 comprising a radical fragmentation reaction of a compound of formula II:

wherein --- , R_1 , R_2 , R_4 , R_5 , R_6 are as defined in Claim 1, n is 0 and R_7 is a suitable group such as 2-thioxo-1,2-dihydropyrid-1-yloxycarbonyl, by irradiation in the presence of a compound of the general formula:

15 wherein R_3 is as hereinbefore defined, R_8 represents a hydrogen atom or an alkyl group containing up to about 7 carbon atoms, and m represents 0 or 2, under an inert atmosphere, n is 1 or 2 by oxidation of a compound defined in Claim 1 and if further desired when --- , forms a single bond by reduction of a compound defined in Claim 1 and if further desired when R_3 represents a
20 halomethyl group by halogenation of a compound defined in Claim 1 and if further desired when R_4 represents an alkoxy group by alkylation of a compound defined in Claim 1.

16. A process for the preparation of a compound according to Claim 1 substantially as hereinbefore described.

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
Remark: Although claim 12 is directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest.☐ No protest accompanied the payment of additional search fees.
